

GRAVEATLAS

Phase 9 — Post-Launch Growth, Community, Scale, Quality & Long-Term Product Evolution

GRAVEATLAS — PHASE 9

POST-LAUNCH GROWTH, COMMUNITY, SCALE, QUALITY & LONG-TERM PRODUCT EVOLUTION

PHASE 1 THROUGH PHASE 8 MUST ALREADY BE COMPLETE.

Continue from the existing GraveAtlas project.

CORE RULES

- Do NOT rebuild Phases 1-8.
- Do NOT start Phase 10.
- Reuse the existing architecture and workflows.
- No paid services without explicit approval.
- Prefer existing/free infrastructure.
- Never expose secrets or private data.
- Never fabricate metrics, users, traffic, tests, coverage or performance.
- Do not collect unnecessary personal information.
- Do not perform destructive or mass production operations without explicit authorization.
- Do not weaken security, moderation, provenance or audit controls.
- Do not delete legitimate cemetery or historical data.
- Complete only Phase 9 and stop.

1. POST-LAUNCH BASELINE

Record actual application, backend, dataset and schema versions; cemetery and record counts; contributions; corrections; moderation backlog; API usage; errors; crashes; and search activity where available. Use NOT AVAILABLE when data cannot be measured.

2. PRODUCT HEALTH

Review Android, backend/API, authentication, search, maps, public records, contributions, moderation, publication, caching, GitHub integration and jobs. Classify findings CRITICAL/HIGH/MEDIUM/LOW/INFO.

3. USER FEEDBACK

Provide structured reporting for bugs, incorrect data, missing cemeteries or records, map issues, usability, feature requests, privacy, security and abuse. Route reports through existing workflows.

4. COMMUNITY CONTRIBUTIONS

Improve source attribution, transcription, cemetery identification, location accuracy, uncertainty handling, duplicate avoidance and respectful documentation. Do not encourage unsupported claims.

5. DATA QUALITY

Identify actual coverage gaps, incomplete records, missing sources, duplicates, invalid coordinates, suspicious dates and correction/moderation backlogs. Absence of data does not prove nonexistence.

6. MODERATION

Improve filtering, search, source comparison, duplicate comparison, record history and correction review without bypassing authorization, validation, provenance or audit logging.

7. SAFE BULK OPERATIONS

Any bulk action requires explicit scope, authorization, preview, validation, audit record, confirmation and recovery/rollback where applicable.

8. PUBLIC DISCOVERY

Improve regional browsing, cemetery collections, map exploration, source-based browsing, recent records and related records using actual data. No fake popularity.

9. SEARCH AND MAP QUALITY

Review zero-result searches, slow/failed searches, matching, duplicate results, coordinates, clustering, markers and mobile map usability. Fix through evidence, testing and measurement. Do not alter authoritative history just for ranking.

10. LOCAL-FIRST EXPERIENCE

Improve bookmarks, recently viewed records, cached public data and offline browsing where practical. Keep private information local where practical.

11. PERFORMANCE AND SCALING

Measure actual startup, search/API latency, map loading, memory, storage, network and battery. Review dataset, repository, API, search, map and cache scaling. Use bounded non-production testing. Never invent benchmarks.

12. ACCESSIBILITY AND INTERNATIONALIZATION

Improve screen readers, content descriptions, text scaling, contrast, touch targets, navigation and map alternatives. Review readiness for multiple languages, dates, numbers and geographic naming. Preserve authoritative names.

13. PUBLIC TRUST

Clearly explain sources, provenance, corrections, contribution review, publication, uncertainty and limitations. Do not claim completeness or certainty without evidence.

14. COMMUNITY SAFETY

Review spam, harassment, vandalism, privacy violations, impersonation, malicious submissions and coordinated abuse. Preserve legitimate documentation.

15. CONTINUOUS SECURITY

Repeat important Phase 6 checks for dependencies, secrets, authentication, authorization, API abuse, GitHub permissions, Android release configuration and exposed endpoints. Never claim an audit unless tested.

16. DEPENDENCY AND RELEASE LIFECYCLE

Review dependency security/deprecation and define practical emergency security, bug-fix, feature and data releases. Test upgrades before release.

17. DATA RELEASE

Maintain validation, provenance, versioning, audit history, cache refresh and recovery. Ordinary public-data changes should not require an Android update unless technically necessary.

18. FEATURE GOVERNANCE

For every proposed feature evaluate user problem, benefit, complexity, security, privacy, cost, maintenance and compatibility. Reject low-value complexity. Experiments require purpose, limited scope, measurable criteria, review and rollback.

19. ROADMAP

Create:

NOW

NEXT

LATER

DO NOT BUILD YET

Base decisions on actual evidence.

20. LONG-TERM PRESERVATION

Preserve Git history, dataset versions, provenance, source references, release records and schema versions.

21. SUSTAINABILITY

If monetization is considered, document options only. Do not implement automatically. Protect public trust and access to historical information.

22. FULL PHASE 1-8 REVIEW

Verify Phase 9 has not weakened security, privacy, authentication, authorization, moderation, provenance, audit, publication, reliability, backup/recovery or release controls.

23. DOCUMENTATION

Create/update:

docs/POST-LAUNCH.md

docs/COMMUNITY-FEEDBACK.md

docs/DATA-QUALITY-DASHBOARD.md

docs/SCALING.md

docs/SEARCH-QUALITY.md

docs/MAP-QUALITY.md

docs/COMMUNITY-SAFETY.md

docs/FEATURE-GOVERNANCE.md

docs/ROADMAP.md

docs/DATA-PRESERVATION.md

docs/SUSTAINABILITY.md

PHASE 9 ACCEPTANCE GATE

[] Baseline

[] Product health

[] Feedback

[] Community contributions

[] Data coverage/quality

[] Moderation

[] Safe bulk operations

[] Discovery

[] Search/map quality

[] Local-first experience

[] Performance/scaling

[] Accessibility

[] Internationalization

[] Public trust

[] Community safety

[] Continuous security

[] Dependency/release lifecycle

[] Data release lifecycle

[] Feature/experiment governance

[] Roadmap

[] Preservation

FINAL REPORT

PHASE 9 STATUS: READY / NOT READY
PRODUCT HEALTH: PASS / FAIL
FEEDBACK: PASS / FAIL
DATA QUALITY: PASS / FAIL
MODERATION: PASS / FAIL
DISCOVERY: PASS / FAIL
SEARCH: PASS / FAIL
MAP: PASS / FAIL
PERFORMANCE: PASS / FAIL
SCALING: PASS / FAIL
ACCESSIBILITY: PASS / FAIL
INTERNATIONALIZATION: PASS / FAIL
COMMUNITY SAFETY: PASS / FAIL
SECURITY: PASS / FAIL
DATA PRESERVATION: PASS / FAIL
FEATURE GOVERNANCE: PASS / FAIL
ROADMAP: PASS / FAIL
SUSTAINABILITY: PASS / FAIL
DOCUMENTATION: PASS / FAIL

ACTUAL RESULTS

Report actual results only for records, cemeteries, contributions, moderation, search, map, API, Android, performance, security and feedback. Use NOT AVAILABLE when necessary. Never invent numbers.

CRITICAL FINDINGS

For each CRITICAL/HIGH/MEDIUM/LOW issue provide component, evidence, impact, remediation and status. Never include secrets.

BLOCKERS

List every issue preventing PHASE 9 = READY.

ROADMAP

NOW: [items]
NEXT: [items]
LATER: [items]
DO NOT BUILD YET: [items]

STOP CONDITION

Do NOT start Phase 10.
Do NOT add paid services without explicit approval.
Do NOT expose secrets.
Do NOT collect unnecessary personal data.
Do NOT perform uncontrolled production load testing.
Do NOT perform destructive bulk operations.
Do NOT fabricate results.
Do NOT weaken security, moderation, provenance or audit controls.
Do NOT delete legitimate cemetery or historical data.

STOP after the final Phase 9 report.

WAIT FOR EXPLICIT INSTRUCTIONS FOR PHASE 10.
